

Predicting Reactions

DOUBLE REPLACEMENT PRACTICE

- a) dilute nitric acid is added to crystals of pure calcium oxide.

- b) hydrogen sulfide is bubbled through a solution of silver nitrate.

- c) a saturated solution of calcium hydroxide is added to a solution of magnesium chloride.

- d) equal volumes of dilute equimolar solutions of sodium carbonate and hydrochloric acid are mixed.

- e) dilute acetic acid solution is added to solid magnesium carbonate.

Predicting Reactions

MORE DOUBLE REPLACEMENT PRACTICE

- a) dilute sulfuric acid is added to a solution of barium acetate.

- b) hydrogen sulfide gas is added to a solution of cadmium nitrate.

- c) solid sodium cyanide is added to water.

- d) a solution of sulfuric acid is added to a solution of barium hydroxide until the same number of moles of each compound has been added.

- e) ammonium chloride crystals are added to a solution of sodium hydroxide.
